Do you suffer from Eye Allergies?

Might be Right for You!

Imagine a Life without Red, Itchy, Watery, Swollen Eyes

What are Ocular Allergies? Ocular Allergies are inflammatory reaction(s) to environmental allergens - pollen, dust mites, grass, rag weed, pet dander, etc. The reaction results in inflammation of the conjunctive tissue, as well as the eyelids. Symptoms are mild to severe with varying degrees of discomfort. While eye discomfort may have different causes that may overlap, **AllerFocus™** offers an easy and painless way to possibly pinpoint the sources.

To determine your risk for a possible ocular allergies, please take the Risk Assessment on the reverse side of this brochure and share it with your eye doctor.

AllerFocus™ allergy skin test is covered by most major medical insurance plans.

How Does AllerFocus™ Work?

Testing:

1

offers a Pain Free, Needle Free Allergy Skin Test that test for 58 of the most common allergens.

2

Processing:

Allergens require about 10 to 15 minutes to form a reaction on the skin if a patient is allergic.

3

Analysis:

Results of the Allergy Test are available to your doctor in 15 minutes.

4

Personalization:

Based on your individual results you and your doctor can discuss various treatment options available.

That may include

Sublingual Therapy.

See Yourself Allergy Free!
